TriviaQA-150 -- unsup_f

TriviaQA-150 -- gold-answer (higher better)

Bottom-left panel uses gold-answer match as the correctness axis (higher = better), addressing the v1 critique that unsup_f is metric-degenerate on TriviaQA (Hyphae 0.000 by quotient).

On both axes Hyphae sits at the latency-advantaged endpoint of the non-dominated frontier. On the gold-answer axis the frontier contains Hyphae plus the best oracle-mode LLMs (Claude 0.960, Llama-3.3-70B / GPT-4.1 0.900-0.907).
